# 3500/64M Dynamic Pressure Monitor

# **Product Datasheet**

Bently Nevada\* Asset Condition Monitoring

# **Description**

The 3500/64M Dynamic Pressure Monitor is a single slot, four-channel monitor that accepts input from high temperature pressure transducers and uses this input to drive alarms. The monitor's one measured variable per channel is bandpass dynamic pressure.

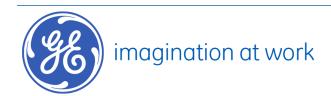

You can use the 3500 Rack Configuration Software to configure the bandpass corner frequencies along with an additional notch filter. The monitor provides a recorder output for control system applications.

The primary purpose of the 3500/64M Dynamic Pressure Monitor is to provide the following:

- Machinery protection by continuously comparing monitored parameters against configured alarm setpoints to drive alarms
- Essential machine information for operations and maintenance personnel

Each channel, depending on configuration, conditions its input signal to generate various parameters called **measured variables**. You can configure **alert** and **danger** setpoints for each active measured variable.

# **Specifications**

#### **Inputs**

| Signal            | Accepts from 1 to 4 pressure transducer signals |  |
|-------------------|---|--|
| Input Impedance   |   |  |
| 3 wire transducer | 10 kΩ   |  |
| 2 wire            | 1.5 M $\Omega$ to 3.5 M $\Omega$ typical        |  |

## Sensitivity

| Dynamic pressure | 100 mV/psi (1.45 mV/mBar) |
|------------------|---------------------------|
|                  |                           |

# **Outputs**

| Front Panel LEDs    |  |  |
|---------------------|--|--|
| OK LED              | Indicates when the 3500/64M Dynamic Pressure Monitor is operating properly.                                |  |
| TX/RX LED           | Indicates when the 3500/64M Dynamic Pressure Monitor is communicating with other modules in the 3500 rack. |  |
| Bypass LED          | Indicates when the 3500/64M Dynamic Pressure Monitor is in Bypass Mode.                                    |  |
| Buffered Transducer |  |  |
|                     | The front of each monitor has one coaxial connector for each channel.                                      |  |
| Outputs             | Each connector is short-circuit protected.   |  |
|                     | The Cascade Mode does not cascade the buffered transducer outputs.   |  |
| Output<br>Impedance | 550 Ω  |  |
| Transducer Supplies |  |  |
| 3 wire              | -24 Vdc  |  |
| 2 wire              | 3.3 mA current source @ 22 Vdc (nominal)   |  |

|                             | +4 to +20 mA<br>Values are proportional to monitor full-scale.  |
|-----------------------------|---|
| Recorder outputs            | The monitor provides individual recorder values for each channel.                                     |
|                             | Monitor operation is unaffected by short circuits on recorder outputs.                                |
| Voltage                     | 0 to +12 Vdc range across load  |
| Compliance (current output) | Load resistance is 0 to 600 $\Omega$ .  |
| Resolution                  | 0.3662 µA per bit<br>±0.25% error at room temperature<br>-0.66 to +0.70% error over temperature range |
|                             | Update rate approximately 100 ms or less  |

## **Signal Conditioning**

| Dynamic Pressure - Direct Filter |   |
|----------------------------------|---|
| Low mode                         | 5 Hz to 4 KHz   |
|                                  | If no LP filter is chosen, the range extends to approximately 5.285 KHz |
| High mode                        | 10 Hz to 14.75 KHz<br>Fixed low pass                                    |

Low and high filtering modes are options for a channel pair. Channels 1 and 2 form a pair, and channels 3 and 4 are the other pair. You may select different band pass options on each channel of a channel pair. However, the channels within the pair must operate in the same filtering mode.

You can set up the signal processing so that the monitor feeds only the channel 1 input to all four channels. This feature is called Cascade Mode and is denoted as **1 >ALL** in the 3500 Rack Configuration Software.

In Cascade Mode, you can select filter mode options for a channel pair only. One transducer provides input to four channels for different filtering requirements. As a result, you can configure four separate bandpass filter options and four separate full-scale ranges with one transducer input.

The two modes of filtering provide different qualities of filtering.

## Low Mode

| Filter Quality |  |
|----------------|--|
| High pass      | 10-pole (200dB per decade, 60 dB per octave) |
| Low pass (LP)  | 10-pole (200dB per decade, 60 dB per octave) |
| Fixed low pass | -78 dB minimum attenuation in the stop       |
| LP = none      | band.  |

# High Mode

| Filter Quality |  |
|----------------|--|
| High pass      | 6-pole (120 dB per decade, 36 dB per octave) -65 dB minimum attenuation in the stop band |

| Line rejection<br>(notch) filter | The line rejection filter has two settings, 50 or 60 Hz. Filter response and center frequency selections are valid for both settings. |
|----------------------------------|---|
| Filter quality response          | -0.175 dB (98%) of Full Scale at Center<br>Frequency of +2 Hz and above   |
|                                  | -0.175 dB (98%) of Full Scale at Center<br>Frequency of –2 Hz and below   |
|                                  | -35 dB (1.8%) of Full Scale from -0.5 Hz of<br>Center Frequency to +0.5 Hz of Center<br>Frequency                                     |

## **Measured Variables**

|--|-----------------|

# Physical

| Monitor Module (Main Board)            |  |  |
|--|--|--|
| Dimensions<br>(Height x Width x Depth) | 241.3 mm × 24.4 mm × 241.8 mm<br>(9.50 in × 0.96 in × 9.52 in) |  |
| Weight                                 | 0.82 kg (1.8 lb)   |  |
| I/O Modules (non-barrier)              |  |  |
| Dimensions<br>(Height x Width x Depth) | 241.3 mm × 24.4 mm × 99.1 mm<br>(9.50 in × 0.96 in × 3.90 in)  |  |
| Weight                                 | 0.20 kg (0.44 lb)  |  |
| I/O Modules (barrier)                  |  |  |
| Dimensions<br>(Height x Width x Depth) | 241.3 mm × 24.4 mm × 163.1 mm<br>(9.50 in × 0.96 in × 6.42 in) |  |
| Weight                                 | 0.46 kg (1.01 lb)  |  |

# **Alarms**

|                             | Use the 3500 Rack Configuration<br>Software to set alert and danger levels<br>for the direct values measured by the<br>monitor.  |
|-----------------------------|--|
| Alarm Setpoints             | Alarms are adjustable from 0 to 100% of full-scale for each measured value. However, when the full-scale range exceeds the range of the transducer, the range of the transducer will limit the setpoint. |
| Accuracy of alarm setpoints | Within 0.13% of the desired value  |

# **Alarm Time Delays**

You can program alarm delays using the 3500 Rack Configuration Software from one to 60 seconds in one second intervals.

| Alert  | From one to 60 seconds in one second intervals                |
|--------|---|
| Danger | 0.1 seconds or from one to 60 seconds in 0.1 second intervals |

# **Hazardous Area Approvals**

For ATEX/IECEx agency

approval ordering options

without internal barriers
